

ACTUAL PHOTO REFERENCE OF OUR INGREDIENT CURCUMA

CURCUGEN[®]

Next Generation Curcumin

DESCRIPTION

Curcugen[®] is a highly concentrated, clinically studied curcumin ingredient, fully derived from a turmeric base with a high, 50% curcuminoid concentration.

It is derived from turmeric oleoresin as base ingredient with a more comprehensive profile of turmeric bioactives than the industry-standard starting material, 95% curcuminoids.

The oleoresin is the native matrix where turmeric's curcuminoids, essential oils and resins are found, which support its unique characteristics.

The Curcugen[®] oleoresin is optimized by the patent-pending SELFD[™] platform technology. In this unique format, the natural ratio of curcuminoids is maintained, its beneficial essential oils are retained, and otherwise discarded resins are made functional. The functional resins in Curcugen[®] add significant value to the ingredient, enhancing the bioavailability and dispersion properties.

Product category | MOBILITY

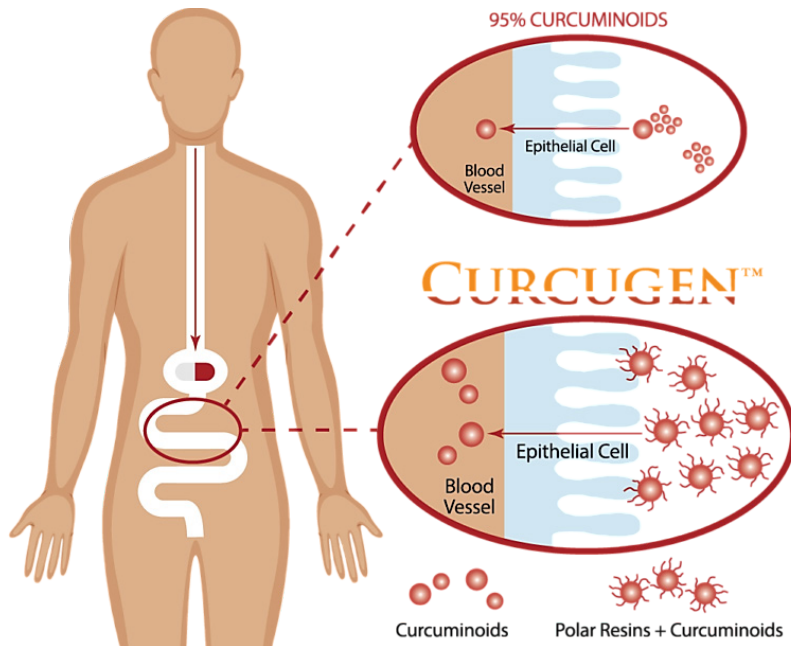

PRODUCT ATTRIBUTES

- Fully natural turmeric-oleoresin extract
- Patent-pending SELFD[™] technology
- 50% curcuminoids
- Retained turmeric essential oils
- Curcuminoid ratios similar to curcuma root
- Sustained released mechanism
- Self-dispersing properties
- Versatile delivery options
- Clinically tested

A clinical study demonstrated this unique technology enhances free curcumin's bioavailability 39 fold¹. Curcugen® has a self-dispersion profile for easy and versatile delivery options, and provides a sustained release mechanism for efficient dosing.

PRODUCT INFORMATION

Standardized on	Curcuminoids 50%
------------------------	------------------

Type of extract	Powder
------------------------	--------

Properties	Water dispersible
-------------------	-------------------

Bioavailability	increased 39x
------------------------	---------------

Recommended dosage	500 mg/day
---------------------------	------------

Suitable for capsules, tablets, sachets gummies, drinks and others
